    Shel-

    Is it possible to save your spreadsheet in "comma separated", or some other
    ASCII format? If it wasn't too large, you could paste it into a message
    here, and we could all give it a try! Several different spreadsheets have
    the ability to import data from others. It would only be necessary to use
    a text editor, to clean it up first.

    73, Fred, K4DII

Just for the record:

"comma separated" is called delimited. If the file had equal spacing
between entries, then it would be fixed-length.

See if save-as has the option of a delimited or ASCII (text) delimited
file format.

Scott

To: info-hams@ucsd.edu

For 14.000-14.350 MHZ in you get 50.000-50.350 out which would
limit it for most transceivers to SSB & CW operation. Ten Tec
used this IF so it could be driven by those low cost 20 meter
QRP rigs. The transverter itself can transmit from 50-52 &

receive from 50-54 on all modes.
